PwC Belgium Customs & International Trade

Global Trade Tool

PwC is pleased to present its internally developed Global Trade Tool which will **support your company in gaining insight in its trade flows** in the form of **different dashboards** consisting of a.o. visualisations, comparison graphs and pie charts (see below).

**Our approach**

1. **Data Gathering and Preparation**
   - All information provided in the tool is based on the company's transactional data whereby the required data consist of:
     - Import/export data - by means of a power of attorney issued by the company, PwC is able to obtain extensive official customs data from the Belgian Customs Authorities. Please note that we can also request said data with other EU Customs Authorities, under the condition they are willing to cooperate and provide us with requested data.
   - Data preparation by PwC of the received data to be uploaded into the tool.

2. **Dashboard Creation**
   Creation of the company’s tailor-made dashboards with main focus on:
   - **Company’s import/export flows** and general customs figures (gain insight in customs data and obtain control of customs operations);
     - **Classification** of the goods imported/exported (review the classification of the goods and detect discrepancies/outliers);
     - **Preferential origin utilisation** (analyse the company’s origin application and quantify the potential duty savings which were missed (if any)).
     - **Broker rationalization** (gain insight in the action of the company’s customs brokers).

3. **Report-out meeting**
   - PwC will organise a report-out meeting with the company’s stakeholders.
   - Based on the data visualisation, PwC will be pleased to assist your company in grasping additional customs (cost-saving) opportunities and, if any, flag potential customs related risks and propose relevant risk mitigation action plans.

Our Dashboard allows you to highlight per year how many duties were overpaid due to poor optimisation of FTA’s.

• Benchmark FTA optimisation per year and keep track of progress.

Our Dashboard allows you to visualise your import and export flows.

Filters can be applied such as Country of Origin (or destination), Commodity Code or year.

This allows a company to perform an in-depth analysis of their most important commodity codes and countries of origin.

Based on this analysis companies can optimise strategy or discover cost-saving opportunities.
