

Your ERP transformation story

Have you stumbled upon some inefficiencies, poor data quality and sub-optimal processes during the preparation of your statutory and tax filings? Are you changing or planning to change your ERP System - moving from SAP to S/4 HANA or Oracle to Oracle Fusion?

The increasing number of specific local compliance requirements across the globe accentuate the need to redefine and finetune your ERP design and related processes.

Now is the time for tax to revisit their current way of working, implement a best practice GAAP to STAT to TAX process and have a seat at the table of ERP transformation projects.

Our Centre of Excellence in Belgium takes a multi-disciplinary approach to help you, from defining the **core design principles** at the early stages of the project to individual **country localization** at global level

A few of the typical localization challenges

Libro Giornale specific format in Italy

Local language journal descriptions in Romania

SAF-T in Portugal

FEC file in France

Daily local FX rates in Poland

E-ledger in Turkey
